

# Set up the specific VS code release version

## 1. Download the VS code.

The latest version of VS Code no longer supports SSH connections to our Raspberry Pi OS. Please use the following link to download version 1.98 or earlier, which has been verified to work.

Welcome to the February 2025 release of Visual Studio Code. There are many updates in this version that we hope you'll like, some of the key highlights include:

- [Next Edit Suggestions \(preview\)](#) - Copilot predicts the next edit you are likely to make.
- [Agent mode \(preview\)](#) - Copilot autonomously completes tasks.
- [Copilot Edits for notebooks](#) - Iterate quickly on edits for your notebooks.
- [Copilot Vision](#) - Attach and interact with images in chat prompts.
- [Code search](#) - Let Copilot find relevant files for your chat prompt.
- [Terminal IntelliSense \(preview\)](#) - Rich completion support for your terminal.
- [Drag & drop references](#) - Quickly open peek references in a new editor.
- [Linux custom title bar](#) - Custom title bar support for Linux enabled by default.
- [Unresolved diagnostics \(preview\)](#) - Prompt when committing with unresolved diagnostics.
- [Soft-delete in source control](#) - Move untracked files to trash instead of deleting them.
- [Custom instructions GA](#) - Use custom instructions to tailor Copilot to your needs.

If you'd like to read these release notes online, go to [Updates](#) on [code.visualstudio.com](#). **Insiders:** Want to try new features as soon as possible? You can download the nightly [Insiders](#) build and try the latest updates as soon as they are available.

**Note:** Mac users, please verify your chip model before downloading. For M-series chips, choose the “silicon” option.

## 2. Disable update.

a) Enter Settings.

b) Search “update”. Then as shown in the figure below, turn off automatic updates for software and extensions.
